Google Chrome: Open PDF in Adobe Reader

Google Chrome will open PDF files in a Chrome browser window. If you would rather open a PDF in Adobe Reader, you can follow these steps.

Chrome Settings:

- Ensure that Adobe Reader is installed on the computer. Download at: <https://get.adobe.com/reader/>
- In Chrome, go to the “Menu” icon, then choose “Settings“.
- In the “Privacy and Security” section, select “Site Settings“.
- Scroll to the bottom and select “Additional Permissions“.
- Scroll down and select “PDF documents“.
- Switch the “Download PDF files instead of automatically opening them in Chrome” to “On“.

PDF files will download in Chrome just like any other file. You can select the downloaded file at the bottom of the window, then choose “Open”, then the file will open in a separate Reader window. Select the “Always open files of this type” option.

Adobe Reader Settings:

If files open in a different application, you may have to change a setting in Adobe Reader.

- Open Adobe Reader, then select “Edit” > “Preferences“.
- Select “General“
- Choose the “Select as Default PDF Handler” button.
- Select “Continue“, then follow the steps provided.
- Let Windows do its thing, then restart the computer.
